Operating Systems								Abbr. BES
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
4.1	150 h	5	4th sem.	Annual	Summer	1 sem.	Compulsory	B.Sc.
1	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>		<b>Planned group size</b>	<b>Language</b>
	Lecture		2 SCH/30 h	45 h	To be announced in course		60	German
Practical / Seminar		2 SCH/30 h	45 h	45 h			15	German
2	<b>Learning outcomes / competences</b> Operating systems manage the resources of a computer system and thus essentially determine its performance and usability. Good knowledge of operating system concepts is therefore essential for understanding modern IT systems. Students will have the following skills after completing the course: <ul style="list-style-type: none"> <li>– know, understand and recognise system-related abstractions as used and provided by operating systems</li> <li>– safely apply important procedures and algorithms from the field of operating systems</li> <li>– know and understand methods used in the design of operating systems</li> <li>– be able to explain both in detail using example systems (primarily UNIX/Linux, partly Windows and other current operating systems)</li> <li>– Students can create hardware-related software (e.g. Linux kernel drivers) in a team and draft an argument/strategy to justify design decisions.</li> </ul>							
3	<b>Contents</b> <ul style="list-style-type: none"> <li>– System architecture of modern computing systems</li> <li>– Tasks, types and structures of operating systems</li> <li>– brief presentation of current computer architectures (pipeline, cache, branch prediction), if applicable</li> <li>– Concurrency, process management, scheduling</li> <li>– Synchronisation and communication</li> <li>– Memory management: Virtual memory, segmentation, paging, page replacement algorithms</li> <li>– Input/output: character and block-oriented devices</li> <li>– File systems: Examples, structure, fault tolerance</li> <li>– Driver models and programming</li> <li>– Security: Authentication, protection mechanisms, authorisation, trusted systems</li> <li>– Changing contents of the practical courses on current topics (e.g. Bash scripting, development of a shell, development of a Linux kernel driver)</li> </ul>							
4	<b>Participation requirements</b> Formally: -, Content: Knowledge from module 3.3 System Programming (SP)							
5	<b>Form of assessment</b> Performance examination or written examination							
6	<b>Condition for the award of credit points</b> Module examination pass							
7	<b>Application of the module</b> (in the following study programmes): Computer Science (B.Sc.)							
8	<b>Module coordinator</b> Prof. Dr.-Ing. Martin Hoffmann							
9	<b>Other information</b> Literature: <ul style="list-style-type: none"> <li>– Tanenbaum: "Modern Operating Systems", Pearson Studium, 2016</li> <li>– Stallings: "Operating Systems: Internals and Design Principles", Prentice Hall, 2011</li> </ul>

Digital Image Processing and Pattern Matching								Abbr. BVM
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
4.2	150 h	5	4th sem.	Annual	Summer	1 sem.	Compulsory	B.Sc.
1	Course type		Contact time	Self-study	Forms of teaching (learning methods)		Planned group size	Language
	Lecture		2 SCH/30 h	45 h	To be announced in course		60	German
	Practical		2 SCH/30 h	45 h			15	German
2	Learning outcomes/competences							
<p>Students know and understand the fundamental methods and procedures of image processing and pattern recognition. They are able to transfer them to typical problems and to develop and evaluation suitable solutions.</p> <p>As part of the practical, the students will additionally develop their own programmes independently within a specified deadline. They will prototype basic algorithms and evaluate them using sample data.</p> <p>In doing so, they will use specialist software libraries such as OpenCV.</p>								
3	Contents							
<p>Image processing and pattern recognition are interdisciplinary fields of work in which methods for the analysis and interpretation of individual images and image sequences are used. Applications include safety technology, remote sensing, mechanical engineering or medical diagnostic support. The following topics are examples of possible course contents: colour spaces, image enhancement and filtering, segmentation, feature extraction, classification procedures, clustering, deep learning.</p>								
4	Participation requirements							
None								
5	Form of assessment							
<p>Written examination or oral examination or term paper or project work or performance examination or scientific poster or short publication manuscript or research funding application or practical, excursion or daily protocol or portfolio or learning diary or OSPE or (according to Section 14 (4) RPO) a combination of different forms of assessment. Examinations may be held digitally.</p>								
6	Condition for the award of credit points							
Certificate of successful participation ("Testat") and passed module examination								
7	Application of the module (in the following study programmes):							
Computer Science (B.Sc.)								
8	Module coordinator							
Prof. Dr.-Ing. Jan Rexilius								
9	Other information							
Literature will be announced in the course.								

**Please note:** The German version of this document is the legally binding version. The English translation provided here is for information purposes only.

Computer Graphics								Abbr. CG
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
4.3	150 h	5	4th sem.	Annual	Summer	1 sem.	Compulsory	B.Sc.
1	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>	<b>Planned group size</b>	<b>Language</b>	
	Lecture		2 SCH/30 h	45 h	To be announced in course	60	German	
	Practical		2 SCH/30 h	45 h		15		
2	<b>Learning outcomes / competences</b> Students can apply the fundamental methods and algorithms in computer graphics. Students are able to name basic terms and explain 2D as well as 3D computer graphics processes. They can summarise the mathematical basics for 2D and 3D computer graphics. Students are able to use common tools from computer graphics and are familiar with the associated technologies.							
3	<b>Contents</b> <ul style="list-style-type: none"> <li>• History, overview, examples: Tools, application examples.</li> <li>• Concepts and basics: Graphic input devices, screen technologies, 3D vision systems, raster graphics.</li> <li>• Object and view transformations: Coordinate systems, transformations, projections, clipping.</li> <li>• Representation and modelling of objects: Polygonal representation, spatial division methods, scene description.</li> <li>• Rendering and visibility: Colour models, visibility techniques, lighting and shading, local lighting models, interpolative shading techniques, global lighting models, rendering pipelines.</li> <li>• Modelling/rendering tools: Modelling and rendering of a small scene using e.g. Autodesk Maya, Blender.</li> </ul>							
4	<b>Participation requirements</b> Formal: - Content: Knowledge from module 1.1 Mathematics 1 (MA1) Section 17 "Progress regulation" of this BPO applies							
5	<b>Form of assessment</b> Performance examination or written examination							
6	<b>Condition for the award of credit points</b> Module examination pass							
7	<b>Application of the module</b> (in the following study programmes): Computer Science (B.Sc.)							
8	<b>Module coordinator</b> Prof. Dr. Kerstin Müller							
9	<b>Other information</b> <b>Literature</b> <ul style="list-style-type: none"> <li>• Bender M., Brill, M.: Computer Graphics, 2nd edition, Hanser Verlag, 2005 <a href="http://www.vislab.de">http://www.vislab.de</a></li> <li>• Hearn D., Baker M.P.: Computer Graphics with OpenGL, Pearson International Edition.</li> <li>• Foley J., van Dam A., Feiner S., Hughes J.: Computer Graphics - Principles and Practice, Addison-Wesley</li> </ul>

Database Systems I								Abbr. DB1
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
3.2	150 h	5	3rd sem.	Annual	Winter	1 sem.	Compulsory	B.Sc.
1	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>		<b>Planned group size</b>	<b>Language</b>
	Lecture		2 SCH/30 h	45 h	To be announced in course		60	German
	Practical course		2 SCH/30 h	45 h			15	German
2	<b>Learning outcomes / competences</b> Databases are a basic technology of computer science. The aim of the course is to provide a secure understanding of the basic concepts and languages of database systems. The students apply a uniform, consistent conceptual framework with regard to database topics. They can explain the theoretical foundations of database systems using examples, in particular functional dependencies, relational algebra and normalisation, they know about the tasks and the meaning of the basic architecture of DBMS. They can search the documentation of several important DBMSs in a targeted problem-solving manner and know the basic functions of the clients of several DBMSs and use them to communicate and program databases. They model complex issues securely in even extensive data models and implement them in various DBMS. In doing so, they make reasoned decisions for the applications of constraints, domains and data types. They apply SQL confidently to solve complex information needs and create extensive non-trivial queries. They use both the current SQL standard (currently SQL:2016) and the dialects of several important DBMSs. They will understand the transaction concept, describe problems/phenomena of multi-user synchronisation and concurrency in read/write notation, and decide how to prevent them by isolating transactions - both through standard isolation levels and through specific implementations in multiple DBMSs. They access databases from their own programmes via database interfaces and process data records in programmes and databases. They programme Persistent Stored Modules in one of the DBMSs discussed.							
3	<b>Contents</b> The following topics are examples of possible content: <ul style="list-style-type: none"> <li>• Tasks and architecture of database systems</li> <li>• Clients and interfaces to database systems</li> <li>• Basics of the relational model</li> <li>• E/R modelling, logical and physical data models, SQL data types, implementation in important DBMSs</li> <li>• Constraints, assertions, integrity, domains, data types</li> <li>• SQL:2016, in particular SQL-schema statements, SQL-data statements, SQL-data change statements, SQL-transaction statements and SQL-connection statements</li> <li>• Transaction concepts, concurrency, isolation level</li> <li>• Database interfaces (JDBC, ODBC)</li> <li>• Basics of Persistent Stored Modules, programming of PSM, triggers</li> </ul>							
4	<b>Participation requirements</b> Formal: - Content: -							
5	<b>Form of assessment</b> Performance examination or oral examination or term paper or project work or practical, excursion or daily log or portfolio or learning diary or OSPE							
6	<b>Condition for the award of credit points</b> Practical course with certificate of successful participation ("Testat") Module examination pass							
7	<b>Application of the module</b> (in the following study programmes): Computer Science (B.Sc.)

Introduction to Computer Science								Abbr. EIN
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
1.0	150 h	5	1st sem.	Annual	Winter	1 sem.	Compulsory	B.Sc.
1	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>		<b>Planned group size</b>	<b>Language</b>
	Lecture		2 SCH/30 h	45 h	To be announced in course.		60	German
	Exercise		2 SCH/30 h	45 h			30	German
2	<b>Learning outcomes / competences</b> The roots and development history of computer science should be understood. Students should recognise the reciprocal effects of society on computer science and vice versa and learn to take a position on this themselves. A special aspect is dedicated to gender equality in computer science in research, teaching and development. The students should get to know diverse job profiles of computer scientists from different industries. The subject area should be understood in its diversity and breadth and the conceptual sub-areas. The students should be enabled to make a targeted choice of subjects in their subsequent studies, taking into account their strengths and inclinations and with regard to their future intended professional field. Students should be able to be encouraged in their choice of study and motivated for successful study.							
3	<b>Contents</b> <ul style="list-style-type: none"> <li>• History of computer science</li> <li>• Achievements in computer science</li> <li>• Informatics and Society</li> <li>• Gender equality in computer science</li> <li>• Subfields of computer science</li> <li>• Importance of data protection</li> <li>• Job profiles of computer scientists</li> <li>• Information storage</li> <li>• Propositional logic</li> <li>• Formal languages</li> <li>• Number representations</li> <li>• Algorithms</li> <li>• Coding</li> <li>• Artificial intelligence</li> <li>• Internet</li> </ul>

Embedded Systems								Abbr. ES
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
4.2	150 h	5	4th sem.	Annual	Summer	1 sem.	Compulsory	B.Sc.
1	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>		<b>Planned group size</b>	<b>Language</b>
	Lecture		2 SCH/30 h	45 h	To be announced in course		60	German
	Practical / Seminar		2 SCH/30 h	45 h			15	German
2	<b>Learning outcomes / competences</b> The students learn the basic knowledge for the implementation of embedded systems. They will gain an understanding of the specifics of embedded systems design and the skills needed to implement embedded systems. In particular, students are given the appropriate specification and programming techniques, models of sequence planning and software and system architectures for embedded systems as "tools of the trade". Students are taught the typical design steps for developing software for embedded systems using exemplary application scenarios.							
3	<b>Contents</b> <ul style="list-style-type: none"> <li>• Overview and areas of application</li> <li>• Special features and requirements</li> <li>• Fundamentals of electronics and hardware of embedded systems</li> <li>• Software development toolchain for embedded systems</li> <li>• Microcontroller programming</li> <li>• Interaction of software and hardware</li> <li>• Design steps</li> <li>• Specification and modelling languages</li> <li>• Real-time operating systems</li> <li>• Realisation and implementation</li> <li>• Validation and evaluation</li> <li>• Practical implementation of embedded systems using application examples.</li> </ul>							
4	<b>Participation requirements</b> <b>Formal:</b> Section 17 "Progress Regulation" of this BPO applies. <b>Content:</b> Knowledge of technical computer science and C++ programming

Business Administration								Abbr. BWL
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
4.5	150 h	5	4th sem.	Annual	Summer	1 sem.	Compulsory	B.Sc.
1	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>		<b>Planned group size</b>	<b>Language</b>
	Lecture Exercise		2 SCH/30 h 2 SCH/30 h	90 h	To be announced in course		60 30	German German
2	<b>Learning outcomes / competences</b> Students acquire knowledge of business contexts in the professional environment of a computer scientist. They know essential business management procedures and basic terms, have an overview of legal forms of companies, investment and financing and production planning and control. They have an overview of marketing strategies. They have become familiar with the relationship between algorithms from computer science and problems from business administration using selected quantitative examples (e.g. location planning, determination of demand).							
3	<b>Contents</b> <ul style="list-style-type: none"> <li>• Basic concepts of business administration</li> <li>• Business strategies</li> <li>• Decision theory</li> <li>• Costs and controlling</li> <li>• Investment and financing</li> <li>• Production</li> <li>• Logistics</li> <li>• Marketing</li> <li>• Human resources and gender aspects</li> </ul>							
4	<b>Participation requirements</b> Section 17 "Progress Regulation" of this BPO applies.							
5	<b>Form of assessment</b> Term paper or written examination or oral examination							
6	<b>Condition for the award of credit points</b> Module examination pass							
7	<b>Application of the module</b> (in the following study programmes): Computer Science (B.Sc.)							
8	<b>Module coordinator</b> Prof. Dr. Dr.-Ing. Matthias König, (covered by Prof. Dr.-Ing. Martin Hoffmann)							
9	<b>Other information</b> Literature will be announced in the course.

Mathematics for Computer Scientists II								Abbr. MA2
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
2.0	240 h	8	2nd sem.	Annual	Summer	1 sem.	Compulsory	B.Sc.
1	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>	<b>Planned group size</b>	<b>Language</b>	
	Lecture		4 SCH/60 h	90 h	To be announced in course	60	German	
Exercise		2 SCH/30 h	60 h	20				
2	<b>Learning outcomes / competences</b> Students can apply functions with several variables and the associated differential calculus. They know linear differential equations and relevant connections from the field of numerics. Elementary numerical procedures can be transferred to other situations. Students are able to select suitable methods for solving elementary stochastic problems. They understand basic concepts of probability theory, important distributions and their significance as well as basic statistical methods.							
3	<b>Contents</b> <b>Analysis II</b> <ul style="list-style-type: none"> <li>• Local and global approximation</li> <li>• Differential equations</li> <li>• Real-valued functions with several variables</li> <li>• Differential calculus for functions of several variables</li> </ul> <b>Numerics</b> <ul style="list-style-type: none"> <li>• Error and error propagation</li> <li>• Elementary numerical methods</li> </ul> <b>Probability calculation and statistics</b> <ul style="list-style-type: none"> <li>• Combinatorics</li> <li>• Probability calculation</li> <li>• Random variables</li> <li>• Distributions</li> <li>• Statistics</li> </ul>

Programming Methods and Techniques								Abbr. PM
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
2.1	210 h	7	2nd sem.	Annual	Summer	1 Sem.	Compulsory	B.Sc.
1	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>	<b>Planned group size</b>	<b>Language</b>	
	Lecture		2 SCH / 30 h	45 h	To be announced in course	60	German	
Practical course		3 SCH / 45 h (of which 1 SCH are tutor supervised)	90 h	15		German		
2	<b>Learning outcomes / competences</b> After attending the course, students are able to use a comprehensive set of techniques and solution patterns for software development in the Java programming language. The successful student will be able to select and use key standard architectural patterns appropriate to the task. Students are able to develop more complex applications and their own libraries. Students master basic techniques and workflows for source code version management and are able to actively apply them in projects. The students recognise "bad smells" and are able to eliminate them with the help of refactoring through safeguarding by means of self-formulated unit tests.							
3	<b>Contents</b> <ul style="list-style-type: none"> <li>• Modelling, Pattern, OOD: <ul style="list-style-type: none"> <li>– Advanced object-oriented design</li> <li>– Deepening understanding of class diagrams with UML</li> <li>– Basic design patterns (Strategy, Decorator, Template, Factory-Method, Observer)</li> <li>– Inheritance vs. composition vs. generics</li> </ul> </li> <li>• Programming methods: <ul style="list-style-type: none"> <li>– Version management using the example of Git, branching strategies and workflows</li> <li>– Systematic unit test with JUnit</li> <li>– Systematic documentation with JavaDoc</li> <li>– Coding Conventions, Bad Smells, CheckStyle</li> <li>– Refactoring with IDEs</li> <li>– Build systems (ANT, Maven, Gradle)</li> <li>– Introduction to Continuous Integration (CI)</li> </ul> </li> <li>• Advanced Java knowledge: <ul style="list-style-type: none"> <li>– Annotations and enumerations</li> <li>– Regular Expressions in Java</li> <li>– Generic Programming (Generics)</li> <li>– Logging in Java</li> <li>– Configuration (Properties, Preferences, CLI)</li> <li>– Anonymous and inner classes</li> <li>– Reflection, Serialisation</li> <li>– Introduction to parallel programming with Java: Threads, synchronize, wait, notify</li> <li>– Java8: Default methods, method references, functional interfaces, language elements for functional programming</li> <li>– Event-oriented programming (Swing or JavaFX, Java2D), models and event hierarchies</li> <li>– Java and XML: JAXB</li> <li>– Use of software libraries (APIs): for example Apache CLI, Apache POI, JFreeChart</li> </ul> </li> </ul>

	Practical course		3 SCH/ 45 h	100 h		15	German	
2	<b>Learning outcomes / competences</b>							
<p>Students acquire comprehensive competences for the development of system-related software in the current system programming languages C and C++, taking into account common standards (e.g. ANSI-C/C11 and C++14/C++17). They are proficient in current tools in this environment, for example the Gnu compilers (gcc, g++) including debugger (gdb) and Make, and know various current standard libraries. Program development using essential parts of the UNIX/Linux programming interface (POSIX) is mastered. Students can apply this knowledge independently to more complex tasks (practical tasks).</p>								
3	<b>Contents</b>

Web-Based Applications								Abbr. WBA
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
4.4	150 h	5	4th sem.	Annual	Summer	1 sem.	Compulsory	B.Sc.
1	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>		<b>planned Group size</b>	<b>Language</b>
	Lecture		2 SCH/30 h	45 h	To be announced in course		60	German
	Practical course		2 SCH/30 h	45 h			15	German
2	<b>Learning outcomes / competences</b> Web-based systems are one of the most widespread forms of distributed information systems and it is impossible to imagine today's private or professional life without them. Students learn to plan, realise and evaluate these professionally. They will get to know the basic technologies standardised by the W3C and acquire the ability to use them appropriately for the problem. They will get an overview of current open source frameworks for professional web development and use a selection of them for the Design and implementation of own application systems.							
3	<b>Contents</b> <ul style="list-style-type: none"> <li>• Introduction, classification of web applications, architectures</li> <li>• Basics (HTTP, session management, standardisation, W3C)</li> <li>• Designing websites (cascading stylesheets, HTML5)</li> <li>• Client-side technologies: JavaScript, Ajax, DOM, current libraries and frameworks</li> <li>• Server-side multi-layer architectures, frameworks for their implementation: e.g. JSF,</li> <li>• Application server (tasks, services, examples): e.g. Glassfish</li> <li>• Web services e.g. REST Data exchange formats e.g. JSON</li> </ul>							
4	<b>Formal participation requirements: -</b> <b>Content:</b> Knowledge of programming in Java, software engineering, introduction to programming with scripting languages, databases							
5	<b>Form of assessment</b> Performance examination or written examination							
6	<b>Condition for the award of credit points</b> Module examination pass							
7	<b>Application of the module</b> (in the following study programmes): Computer Science (B.Sc.)							
8	<b>Module coordinator</b> Prof. Dr.-Ing. Grit Behrens							
9	<b>Other information</b> Literature: Kurz, Marinschek: „JavaSever Faces 2.2: Grundlagen und erweiterte Konzepte“, dpunkt 2013 Schießer, Schmollinger „Workshop in JavaEE: Ein praktischer Einstieg in die Java Enterprise Edition mit dem Web Profile“, dpunkt 2014 Dean Cemron „HTML5, JavaScript und jQuery“, dpunkt 2015 Somin Timms „Mastering JavaScript Design Patterns“, Packt Publishing 2016

Compulsory Elective Module from List 1 "Methods in Computer Science" Database Systems II: Architectures and Implementation Techniques								Abbr. DB2
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
5.10	150 h	5	5th/6th sem.	Bi-annual according to demand	Summer/ winter according to demand	1 sem.	Compulsory elective	B.Sc.
1	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>		<b>Planned group size</b>	<b>Language</b>
	Lecture		2 SCH/30 h	45 h	To be announced in course		60	German
	Practical course		2 SCH/30 h	45 h			15	German
2	<b>Learning outcomes / competences</b> Database systems are highly complex software systems whose safe application and use require in-depth knowledge of implementation and administration. Students can confidently analyse and explain problems in database systems using their acquired theoretical knowledge in advanced database techniques and derive solution approaches from theory. They make reasoned decisions for the application of these techniques. They can install and administer databases, analysing and implementing the requirements of the application software. They will be able to analyse the performance of databases and, by taking appropriate technical measures, also improve this. They can formulate advanced SQL and apply it meaningfully. They can analyse and optimise SQL to increase performance (SQL tuning).							
3	<b>Contents</b> The following topics are examples of possible content: <ul style="list-style-type: none"> <li>• Architecture of database systems</li> <li>• Managing the background memory</li> <li>• Buffer management</li> <li>• File organisation and access structures</li> <li>• Special index structures</li> <li>• Basic algorithms for database operations</li> <li>• Advanced SQL</li> <li>• Request optimisation</li> <li>• Transaction models</li> <li>• Transaction management</li> <li>• Recovery and data backup</li> <li>• Modern database paradigm</li> <li>• Current problems in database technology</li> </ul>							
4	<b>Participation requirements</b> Formal: - Content: Contents of Module 3.2 "Database Systems I" (DB1)							
5	<b>Form of assessment</b> Oral examination or term paper or project work or practical, excursion or daily log or portfolio or learning diary or OSPE							
6	<b>Condition for the award of credit points</b> Practical with certificate of successful participation ("Testat") Passed module examination							
7	<b>Application of the module</b> (in the following study programmes): Computer Science (B.Sc.)							
8	<b>Module coordinator</b> Prof. Dr. Dominic Becking

Compulsory Elective Module from List 1 "Methods in Computer Science" Introduction to Audiovisual Computing								Abbr. AV1
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
5.11	150 h	5	5th/6th sem.	Bi-annual according to demand	Summer/ winter according to demand	1 sem.	Compulsory elective	B.Sc.
1	<b>Course type</b>		<b>Contact time</b>	<b>Self-study</b>	<b>Forms of teaching (learning methods)</b>		<b>Planned group size</b>	<b>Language</b>
	Lecture		2 SCH/30 h	45 h	To be announced in course		60	German
	Practical		2 SCH/30 h	45 h			15	German
2	<b>Learning outcomes/competences</b>							
	<p>As a sub-field of computer science, media informatics are strongly interdisciplinary. The background for their creation is the increasing digitalisation of text, image and video since the early 1990s. Countless new technologies and applications and the corresponding markets, fields of activity and job profiles have developed around the concept of multimedia. The generation, processing, storage and distribution of audiovisual signals are central aspects of media informatics. The special field of audiovisual computing deals with the interactions and technical fundamentals and possibilities on the one hand and artistic design on the other. Music informatics as a sub-field of audiovisual computing e.g. deals with all computer-based techniques and the development of applications for the composition, production, distribution, billing/licensing and enjoyment of music and other audio products. In addition, special aspects of music management, the music business and the technical support of creative processes of music creators are the subject of the field.</p> <p>The students develop a scientific approach to this important sub-field of media informatics by means of a complex project from the field of audiovisual computing.</p> <p>Students experience and describe music, video and image as a complex cultural and technical phenomenon. They analyse aspects of the generation, production and distribution of audiovisual media in relation to the role of IT. The students include findings about music and visual communication as a universal cultural phenomenon in their considerations and familiarise themselves with scientific literature from anthropology, psychology and cultural studies. They use standard programmes of audiovisual computing and produce their own music and audiovisual works of art.</p> <p>In consultation with the lecturer, the students select project topics and work on these over a semester as a project group. They research the state of the art and science, formulate a development goal and work out the required skillset. They use current project management methods and tools. They implement selected parts of the modelling into functioning software. They present results in both academic as well as musical and visual art formats.</p>							
3	<b>Contents</b>							
	<p>Audiovisual computing uses methods and findings from various fields of computer science, physics, mathematics and cultural studies. The application of such methods is the main content of the course.</p> <p>The following topics are examples of possible content:</p> <ul style="list-style-type: none"> <li>• Development of basic technologies and frameworks for interactive art and media</li> <li>• Artistic projects in composition, music, media and video</li> <li>• Interactive installations for trade fairs, cultural institutions, museums and events</li> <li>• Immersive media in the public sphere</li> <li>• Visualisation and sonification of large datasets</li> <li>• Design of scenarios and soundscapes for cross-media and trans-media forms of narration</li> <li>• Design of interactive media (gaming, infotainment, web)</li> <li>• Mathematical foundations of music</li> <li>• Physical foundations of music</li> <li>• Analogue and digital sound generators</li> </ul>							

**Please note:** The German version of this document is the legally binding version. The English translation provided here is for information purposes only.

Compulsory Elective Module from List 1 "Methods in Computer Science" Functional Programming								Abbr. FP
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
5.12	150 h	5	5th/6th sem.	Bi-annual according to demand	Summer/winter according to demand	1 sem.	Compulsory elective	B.Sc.
1	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>		<b>Planned group size</b>	<b>Language</b>
	Lecture		2 SCH/30 h	45 h 45 h	To be announced in course		60	German
	Practical course		2 SCH/30 h				15	German
2	<b>Learning outcomes / competences</b> Functional programming is an important programming paradigm alongside object-oriented programming and distributed/parallel programming. Concepts from functional programming such as lambda expressions are gradually finding their way into modern languages such as Java9 and C#. The course introduces the concepts of functional programming and shows the implementation in the example languages Haskell and Scala. The students master important concepts of functional programming and can apply them using the Haskell and Scala programming languages. They recognise functional concepts in other modern programming languages and can apply them in a results-oriented manner.							
3	<b>Contents</b> Selection of topics for lecture: <ul style="list-style-type: none"> <li>• Functions and operators</li> <li>• Lambda notation</li> <li>• Higher order functions: map, filter, reduce, zip</li> <li>• Functional composition and currying</li> <li>• Data structures</li> <li>• (Algebraic) types and type classes, polymorphism, pattern matching</li> <li>• Functors and monads, combinatorial libraries</li> <li>• Treatment of optional values</li> <li>• Evaluation strategies, laziness</li> <li>• Modularisation and interfaces</li> <li>• Calculability and lambda calculus</li> <li>• Type inference systems</li> <li>• Introduction to the programming languages Haskell and Scala</li> </ul>							
4	<b>Participation requirements</b> None							
5	<b>Form of assessment</b> Oral examination or written examination							
6	<b>Condition for the award of credit points</b> Certificate of successful participation ("Testat") and passed module examination

Compulsory Elective Module from List 1 "Methods in Computer Science" Computer Graphics: Image Synthesis								Abbr. VL1
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
5.16	150 h	5	5th/6th sem.	Bi-annual according to demand	Summer/ winter according to demand	1 sem.	Compulsory elective	B.Sc.
<b>1</b>	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>	<b>Planned group size</b>	<b>Language</b>	
	Lecture		2 SCH/30 h	45 h	To be announced in course	60		
	Practical / Seminar		2 SCH/30 h	45 h		15	German	
<b>2</b>	<b>Learning outcomes / competences</b> Building on the acquired basics of the lecture Computer Graphics, students can apply methods from parts of the fields of visualisation and global illumination. The students can analyse the problems posed and choose the appropriate procedures from the field of computer graphics.							
<b>3</b>	<b>Contents</b> <ul style="list-style-type: none"> <li>• Global lighting methods: Ray tracing, radiosity.</li> <li>• Visualisation.</li> </ul>							
<b>4</b>	<b>Participation requirements</b> Formal: - Content: Knowledge from module Computer Graphics (CG)							
<b>5</b>	<b>Form of assessment</b> Oral examination or written examination							
<b>6</b>	<b>Condition for the award of credit points</b> Practical course with certificate of successful participation ("Testat"), passed module examination							
<b>7</b>	<b>Application of the module</b> (in the following study programmes): Computer Science (B.Sc.)							
<b>8</b>	<b>Module coordinator</b> Prof. Dr. Kerstin Müller							
<b>9</b>	<b>Other information</b> <ul style="list-style-type: none"> <li>• Hearn D., Baker M.P.: Computer Graphics with OpenGL, Pearson International Edition.</li> <li>• Foley J., van Dam A., Feiner S., Hughes J.: Computer Graphics - Principles and Practice, Addison-Wesley</li> </ul>

Compulsory Elective Module from List 1 "Methods in Computer Science" Practical Aspects of Computer Security								Abbr. PIS
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
5.18	150 h	5	6th sem.	Annual according to demand	Summer	1 sem.	Compulsory elective	B.Sc.
1	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>	<b>Planned group size</b>	<b>Language</b>	
	Lecture		2 SCH/30 h	45 h	To be announced in course	60	German	
Practical / Seminar		2 SCH/30 h	45 h	15		German		
2	<b>Learning outcomes / competences</b>							
<p>Expertise: Students have an in-depth understanding of the modus operandi of attackers against IT systems and networks and of concrete attacks and dangers on the Internet. They are able to assess protective measures as well as to participate in the implementation of such protective measures.</p> <p>Methodological competence: Students can recognise attacks, describe, structure and classify the phases of an attack and outline and apply suitable protective measures. In addition, students can evaluate the suitability of (protective) measures and apply the measures.</p> <p>Social competence: Due to the teamwork, among other things in the practical tasks, the students are able to develop solutions in the group and solve tasks cooperatively.</p>								
3	<b>Contents</b>							
<ul style="list-style-type: none"> <li>- Attackers' procedure models</li> <li>- Attack method (local/remote)</li> <li>- Protective measures</li> <li>- Typical attacks on systems <ul style="list-style-type: none"> <li>o Attacks on weaknesses in protocols</li> <li>o Attacks on the configuration of systems</li> <li>o Attacks on web applications</li> <li>o Special monitoring or attack programmes</li> </ul> </li> <li>- Attack detection</li> <li>- Intrusion detection systems</li> </ul>								
4	<b>Participation requirements</b>							
<p>Formal: -</p> <p>Content: Basic knowledge from Mathematics for Computer Scientists I and II, programming skills, computer engineering, operating systems, databases, web technologies</p>								
5	<b>Form of assessment</b>							
Oral examination or project work								
6	<b>Condition for the award of credit points</b>							
<p>Passing the module examination.</p> <p>Section 17 "Progress Regulation" of the Examination Regulations for Computer Science (B.Sc.) applies.</p>								
7	<b>Application of the module</b> (in the following study programmes):							
Computer Science (B.Sc.)								
8	<b>Module coordinator</b>

Compulsory Elective Module from List 1 "Methods in Computer Science" Security and Dependability								Abbr. BSZ
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
5.19	150 h	5	5th sem.	Annual according to demand	Winter	1 sem.	Compulsory elective	B.Sc.
1	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>		<b>Planned group size</b>	<b>Language</b>
	Lecture		2 SCH/30 h	45 h	To be announced in course		60	German
	Practical / Seminar		2 SCH/30 h	45 h			15	German
2	<b>Learning outcomes / competences</b>							
	<p>Expertise: The students understand the connections and differences between the safety terms Dependability, Safety and Security. They are familiar with typical vulnerabilities and threats and know suitable countermeasures and mechanisms to increase reliability and security.</p> <p>Methodological competence: Students can make initial assessments of the safety and reliability of systems and software, evaluate the possibilities and limits of solutions and propose possible improvements.</p> <p>Social competence: Due to the teamwork, among other things in the practical tasks, the students are able to develop solutions in the group and solve tasks cooperatively.</p>							
3	<b>Contents</b>							
	<ul style="list-style-type: none"> <li>- Basic concepts and problems of safety and reliability;</li> <li>- Reliability and security objectives (confidentiality, integrity, availability, safety, maintainability, ...);</li> <li>- Vulnerability, threat, impact and risk analyses;</li> <li>- Basic forms of addressing risks</li> <li>- Design and structure of risk treatment plans</li> <li>- Measures and mechanisms to increase the reliability and security of software and systems (cryptography, authentication, access control, protocols, Firewalls, etc.)</li> </ul>							
4	<b>Participation requirements</b>							
	<p>Formal: -</p> <p>Content: Knowledge from Mathematics for Computer Scientists I and II, programming skills, technical computer science, operating systems, databases, web technologies</p>							
5	<b>Form of assessment</b>							
	Oral examination or written examination or project work							
6	<b>Condition for the award of credit points</b>							
	<p>Passing the module examination.</p> <p>Section 17 "Progress Regulation" of the Examination Regulations for Computer Science (B.Sc.) applies.</p>

Compulsory Elective Module from List 1 "Methods of Computer Science" Advanced Programming Techniques								Abbr. SM
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
5.20	150 h	5	5th/6th sem.	Bi-annual according to demand	Summer/ winter according to demand	1 sem.	Compulsory elective	B.Sc.
1	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>		<b>Planned group size</b>	<b>Language</b>
	Lecture		2 SCH/30 h	45 h	To be announced in course		60	German
	Practical course		2 SCH/30 h	45 h			15	German
2	<b>Learning outcomes / competences</b> Participants will get an overview of different programming paradigms and language concepts as well as their fields of application. They get to know selected concepts and their implementation in modern programming languages in more detail and understand the structure and principles of programming languages. Participants are enabled to learn and classify new language constructs independently. After successful completion of the module, they will be able to choose a suitable paradigm and select and use the appropriate programming language in a solution-oriented way.							
3	<b>Contents</b> Selection of topics for lecture: <ul style="list-style-type: none"> <li>• Overview of programming paradigms and concepts</li> <li>• Deepening understanding of selected paradigms <ul style="list-style-type: none"> <li>– Object-oriented programming (Ruby: duck typing, open classes, mixins, metaprogramming)</li> <li>– Functional programming (Haskell: lambda notation, currying, higher order functions, data types/type classes, monads)</li> <li>– Hybrid object-oriented and functional programming (Scala: list comprehensions, traits, companion objects, pattern matching, option data type)</li> <li>– Logical programming (Prolog: unification, resolution, recursion, lists: head, tail, accumulators; cuts)</li> <li>– Concurrent/parallel programming (for example Erlang)</li> </ul> </li> <li>• Consolidation of selected concepts <ul style="list-style-type: none"> <li>– Calculability and lambda calculus</li> <li>– Evaluation strategies, laziness</li> <li>– Algebraic types with pattern matching</li> <li>– Combinatorial libraries, functors and monads</li> <li>– Concurrency on the JVM using actuators in Akka</li> <li>– Handling of optional or null/nil values</li> </ul> </li> <li>• DSL and tools (Xtext/Xtend, Eclipse plugins, Antlr)</li> <li>• Model-based development (UML; Eclipse EMF/GMF, ...)</li> <li>• Model-based development (Matlab/Simulink)</li> </ul>							
4	<b>Participation requirements</b> None							
5	<b>Form of assessment</b> Oral examination or written examination							
6	<b>Condition for the award of credit points</b> Certificate of successful participation ("Testat") and passed module examination							
7	<b>Application of the module</b> (in the following study programmes):

Compulsory Elective Module from List 1 "Methods in Computer Science" Compiler Construction								Abbr. CB
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
5.21	150 h	5	5th sem.	Annual	Winter	1 sem.	elective	B.Sc.
1	<b>Course type</b>		<b>Contact hours</b>		<b>Self-study</b>	<b>Teaching forms (learning methods)</b>		<b>Planned group size</b>
	Sem. lessons Practical / Seminar		2 SCH/30 h 2 SCH/30 h		45 h 45 h	To be announced in course.		60 15
2	<b>Learning outcomes/competences</b>							
	<p>Participants gain an insight into the basic techniques of compiler construction. They are familiar with the structure of compilers and the stages of translation. They are able to apply the procedures covered to tasks where formal text needs to be edited and/or transformed and/or interpreted. The methods discussed are applied in a project to construct a (small) compiler.</p> <p>In selected semesters, the module may be conducted in cooperation with the University of Alberta (Edmonton, Canada). Through the international exchange, students learn about the cultural characteristics of the partner country and can improve their active English skills.</p>							
3	<b>Contents</b>							
	<p>Selection of topics for the seminar lessons:</p> <ul style="list-style-type: none"> <li>• Overview of programming paradigms and concepts</li> <li>• Regular and context-free languages and grammars</li> <li>• Lexical analysis: scanners</li> <li>• Syntactic analysis: LL(k) parsers, abstract syntax tree</li> <li>• Context-sensitive analysis, symbol tables</li> <li>• LLVM-IR</li> <li>• Parser/compiler generators (e.g., ANTLR)</li> <li>• Changing content on current topics in the seminar lessons</li> </ul>							
4	<b>Participation requirements</b>							
	None							
5	<b>Form of assessment</b>							
	<p>Written examination, or oral examination, or written term paper, or project work, or performance examination, or OSPE, or open-book examination, or (in accordance with Section 14 (4) RPO) a combination of several forms of assessment.</p> <p>Examinations may be held digitally.</p>							
6	<b>Condition for the award of credit points</b>							
	Passed module examination and, if necessary, certificate of successful participation ("Testat")							
7	<b>Application of the module</b> (in the following study programmes):							
	Computer Science (B.Sc.)							
8	<b>Module coordinator</b>							
	Prof. Dr.-Ing. Carsten Gips Dipl.-Inform. Birgit Christina George							
9	<b>Other information</b>							
	<p>Basic literature:</p> <ul style="list-style-type: none"> <li>• Nystrom, R.: "Crafting Interpreters," Genever Benning, 2021</li> <li>• Parr, T.: "The Definitive ANTLR 4 Reference," Pragmatic Programmers, 2014</li> <li>• Aho, Lam, Sethi, Ullman: "Compilers: Principles, Techniques, and Tools," Addison Wesley, 2013</li> </ul>

Compulsory Elective Module from List 2 "Applications of Computer Science" Computer Art, Social Computing and New Communications Algorithms								Abbr. CSK
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
6.22	450 h	15	5th/6th sem.	Bi-annual according to demand	Summer/ winter according to demand	1 sem.	Compulsory elective	B.Sc.
<b>1</b>	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>	<b>Planned group size</b>	<b>Language</b>	
	Lecture		2 SCH/30 h	45 h	To be announced in course	60		
	Practical / Seminar		4 SCH/ 30 h	315 h		15	German	
<b>2</b>	<b>Learning outcomes / competences</b> Students have an overview of current techniques and applications of computer art. They design and implement and/or integrate interaction techniques and hardware of the interaction between social groups and software systems and become familiar with design principles and realisation methods for software, even for those with large user groups. They construct new forms of communication and are familiar with corresponding new algorithms.							
<b>3</b>	<b>Contents</b> The software applications to be created come from the application fields of media informatics, visualisation, computer vision, music informatics, AI, game theory, robotics, art, psychology and sociology. An interdisciplinary orientation is desirable. Students will design and implement creative, new forms of communication, action scenarios and interaction mechanisms between humans and machines or between humans and machines as communication partners. Aspects of large scale and mass interaction can be included.							
<b>4</b>	<b>Participation requirements</b> None							
<b>5</b>	<b>Form of assessment</b> Project work							
<b>6</b>	<b>Condition for the award of credit points</b> Successful completion of the project work							
<b>7</b>	<b>Application of the module</b> (in the following study programmes): Computer Science (B.Sc.)							
<b>8</b>	<b>Module coordinator</b> Prof. Dr. Dominic Becking, Prof. Dr. Kerstin Müller							
<b>9</b>	<b>Other information</b>

Compulsory Elective Module from List 2 "Applications of Computer Science" Database Applications								Abbr. DBA
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
6.23	450 h	15	5th/6th sem.	Bi-annual according to demand	according to demand	1 sem.	Compulsory elective	B.Sc.
1	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>		<b>Planned group size</b>	<b>Language</b>
	Lecture		2 SCH/30 h	360 h	To be announced in course		60	German
Practical course		4 SCH/60 h					15	German
2	<b>Learning outcomes / competences</b> Databases are the foundation of every large software system. The interaction of programming and database is of utmost importance. The students survey and formulate the requirements of different software system classes for databases. They design special data models for different system classes and implement them. They design and implement a software system consisting of an application programme and a coordinated database. They implement programme logic in the database with Persistent Stored Modules. The participants use various APIs to connect to User programmes on databases...							
3	<b>Contents</b> The following topics are examples of possible content: <ul style="list-style-type: none"> <li>• Software systems and requirements for databases</li> <li>• Requirements analysis for database applications</li> <li>• Object-oriented and ER modelling</li> <li>• Persistent Stored Modules (SQL/PSM)</li> <li>• Trigger</li> <li>• Impedance Mismatch</li> <li>• Cursors</li> <li>• Object Relational Mappings - Object Language Bindings (SQL/OLB)</li> <li>• APIs and frameworks for database access</li> </ul>							
4	<b>Participation requirements</b> Formal: - Content: Contents of Module 3.2 "Database Systems I" (DB1)							
5	<b>Form of assessment</b> Performance examination or oral examination or term paper or project work or practical, excursion or daily log or portfolio or learning diary or course examination							
6	<b>Condition for the award of credit points</b> Practical course with certificate of successful participation ("Testat") Passed module examination							
7	<b>Application of the module</b> (in the following study programmes): Computer Science (B.Sc.)							
8	<b>Module coordinator</b> Prof. Dr. Dominic Becking

Compulsory Elective Module from List 2 "Applications of Computer Science" Embedded Software								Abbr. ESW
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
6.24	450 h	15	5th/6th sem.	Bi-annual according to demand	Summer/ winter according to demand	1 sem.	Compulsory elective	B.Sc.
<b>1</b>	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>	<b>Planned group size</b>	<b>Language</b>	
	Lecture		2 SCH/30 h	45 h	To be announced in course	60	German	
	Practical course		4 SCH/60 h	315 h		15	German	
<b>2</b>	<b>Learning outcomes / competences</b>							
	<p>The students know how to apply the methods of software engineering for embedded systems, taking into account the boundary conditions of these systems. They have the ability to carry out the development of software for embedded systems from planning to implementation.</p> <p>To deepen their knowledge, students work independently on projects in which they develop "embedded software" for an application. In the team-oriented project work, project management and self-competences are deepened.</p>							
<b>3</b>	<b>Contents</b>							
	<ul style="list-style-type: none"> <li>• Requirements</li> <li>• Software Architecture and Design Patterns</li> <li>• UML/SysML for Embedded Systems and Model-Based Development</li> <li>• Embedded operating systems</li> <li>• Quality assurance and standards</li> <li>• Changing content of the projects on current topics, e.g. <ul style="list-style-type: none"> <li>◦ Internet of Things technologies</li> </ul> </li> </ul> <p>For example, an application is developed as an in-depth project (e.g. for the Internet of Things, computer vision, robotics, measurement and control technology). In the process, hardware abstraction layers or operating systems for embedded systems (e.g. embedded Linux, RTOS) can be used as needed.</p>							
<b>4</b>	<b>Participation requirements</b>							
	<b>Formal:</b> - <b>Content:</b> Knowledge of embedded systems, software engineering and C++ programming							
<b>5</b>	<b>Form of assessment</b>							
	Project work							
<b>6</b>	<b>Condition for the award of credit points</b>							
	Successful completion of the project work

Compulsory Elective Module from List 2 "Applications of Computer Science"								Abbr. BIS
Internet Security								
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
6.25	450 h	15	5th sem.	Annual according to demand	Winter	1 sem.	Compulsory elective	B.Sc.
1	Course type		Contact hours	Self-study	Forms of teaching (forms of learning)		Planned group size	Language
	Lecture		2 SCH/30 h	60 h	To be announced in course		60	German
	Practical / Seminar		4 SCH/60 h	300 h			15	German
2	Learning outcomes / competences							
	<p>Expertise: The students are familiar with the most important basic technologies for securing networks. They demonstrate an in-depth understanding of security mechanisms at the different protocol layers (application layer, transport layer, network layer, link layer, physical layer) and know the structure, principles, architecture and functioning of security components and systems in the field of internet security. They are able to explain in detail the characteristics and basic principles of the problem space of internet security and demonstrate a sound knowledge of practice and theory in this field.</p> <p>Furthermore, they are familiar with current developments in the field of internet security and can explain them (e.g. security in peer-to-peer systems, security in mobile networks, security in cloud computing, block chains, etc.).</p> <p>Methodological competence: Students will be able to apply the basics of IT security and cryptography to the field of communication networks and thus develop and evaluate solutions for internet security.</p> <p>Social competence: Due to the teamwork, among other things in the practical tasks, the students are able to develop solutions in the group and solve tasks cooperatively.</p>							
3	Contents							
	<ul style="list-style-type: none"> <li>- Internet security: Introduction, motivation and challenges</li> <li>- Basic feature: Reference model for network security, security standards for networks and the Internet, threats, attacks, security services and mechanisms</li> <li>- Cryptographic basics for securing networks: symmetric cryptography and asymmetric cryptography and their application in networks, supporting mechanisms for the implementation of security solutions, public key infrastructures</li> <li>- Security at the different protocol layers (application layer, transport layer, network layer, link layer, physical layer)</li> <li>- Applied Internet Security: Firewalls, Intrusion Detection Systems, Identity Management</li> <li>- Selected topics in internet security: Security for Distributed Systems, Security for Web Applications and Web Services, Security for Cloud Computing</li> <li>- Changing content of the projects on current topics</li> <li>- Replication of attack scenarios and countermeasures in the laboratory</li> </ul>							
4	Participation requirements

Compulsory Elective Module from List 2 "Applications of Computer Science" Mobile Applications								Abbr. MOB
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
6.26	450 h	15	5th/6th sem.	Bi-annual	Summer/ winter	1 sem.	Compulsory elective	B.Sc.
<b>1</b>	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>	<b>Planned group size</b>	<b>Language</b>	
	Lecture		2 SCH/30 h	60 h	To be announced in course	60	German	
	Practical / Seminar		4 SCH/60 h	300 h		15	German	
<b>2</b>	<b>Learning outcomes / competences</b>							
	<p>Software development for mobile devices is the further development of traditional (application) software development towards an open, distributed and dynamic technology that combines mobile, powerful devices with traditional structures of the internet and distributed software systems.</p> <p>The aim of this module is to enable students to</p> <ul style="list-style-type: none"> <li>• understand the special features and boundary conditions as well as concepts and solution approaches of mobile application development and also be able to estimate them quantitatively,</li> <li>• get to know system architecture and application development solutions tailored to this,</li> <li>• and be able to apply this knowledge practically to solve concrete tasks.</li> </ul> <p>Students receive an overview of current hardware platforms and mobile operating systems and learn to master a current system (for example Android). After attending the course, they will be able to develop their own mobile applications, taking usability, energy and security aspects into account.</p> <p>To deepen their knowledge, students work independently on projects and deepen their project management and personal skills during the team-oriented project work.</p>							
<b>3</b>	<b>Contents</b>							
	<ul style="list-style-type: none"> <li>- Mobile application technology, hardware, operating systems</li> <li>- Applications &amp; Application Development</li> <li>- Current software frameworks for mobile applications</li> <li>- Use of hardware components of mobile devices</li> <li>- Integration of existing sensors and interfaces</li> <li>- Changing content of the projects on current topics, e.g. <ul style="list-style-type: none"> <li>- Resource management in mobile systems and energy aspects</li> <li>- Security for mobile systems and applications</li> </ul> </li> </ul>

Compulsory Elective Module from List 2 "Applications of Computer Science" Software Quality								Abbr. SQ
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
6.28	450 h	15	5th/6th sem.	Bi-annual according to demand	Summer/ winter according to demand	1 sem.	Compulsory elective	B.Sc.
1	<b>Course type</b>		<b>Contact hours</b>	<b>Self-study</b>	<b>Forms of teaching (forms of learning)</b>	<b>Planned group size</b>	<b>Language</b>	
	Lecture		2 SCH/30 h	60 h	To be announced in course	60	German	
	Practical course		4 SCH/60 h	300 h		15	German	
2	<b>Learning outcomes / competences</b> <p>The course introduces techniques and methods for software quality assurance in the development and maintenance of software systems. Successful participation in the course will provide an understanding of software quality and the importance of systematic software testing. The participants know the general test process and the roles involved. They know different test levels and types and are able to select and use different static and dynamic testing techniques and tools according to requirements. Participants will be able to develop higher quality software using the methods learned.</p> <p>The lecture serves to convey basic theoretical knowledge and skills, with practical application being learned and deepened in the accompanying project. Through the team-oriented project work, the participants' project management and self-competences are deepened.</p> <p>After successful participation in this module, it is optionally possible to take an examination for "Certified Tester - Foundation Level" according to ISTQB at an examination institute certified by the German Testing Board.</p>							
3	<b>Contents</b> <p>Selection of topics for lecture:</p> <ul style="list-style-type: none"> <li>• Quality aspects of software systems</li> <li>• Basics of software testing, test principles, fundamental test process</li> <li>• Testing in the software life cycle, test levels and types</li> <li>• Static testing techniques: Reviews, static analysis</li> <li>• Dynamic test techniques, test design <ul style="list-style-type: none"> <li>– Specification-based (black box): Equivalence partitioning and boundary value analysis, decision tables, state-based test, other black-box design methods</li> <li>– Structure-based (white-box): Coverage (C0, C1, C2, C3), control flow anomalies and data flow anomalies</li> <li>– Experience-based test: Error Guessing, Exploratory Testing</li> </ul> </li> <li>• Test concept, test strategy, test management</li> <li>• Tools</li> <li>• Test automation</li> <li>• Test case generation</li> <li>• Changing content of the projects on current topics</li> </ul>

Compulsory Elective Module from List 2 "Applications of Computer Science" Computer Vision								Abbr. CV
No.	Workload	Credit points	Study semester	Frequency	Sem.	Duration	Type	Q level
6.32	450 h	15	5th/6th sem.	Bi-annual according to demand	Summer/ winter according to demand	1 sem.	Compulsory elective	B.Sc.
1	<b>Course type</b>		<b>Contact time</b>	<b>Self-study</b>	<b>Forms of teaching (learning methods)</b>		<b>Planned group size</b>	<b>Language</b>
	Lecture		2 SCH/30 h	45 h	To be announced in course		60	German
	Practical		4 SCH/60 h	315h			15	German
2	<b>Learning outcomes/competences</b> Students apply common methods in the field of computer vision and can transfer these to practical examples using suitable software libraries such as OpenCV. In addition, they can evaluate their results qualitatively and quantitatively using appropriate metrics. As part of a project work, students learn to carry out practical projects in the field of computer vision independently in teams within a specified deadline. They are able to find solutions and present them in an appropriate and comprehensible form. Through team-oriented project work, students learn how to find solutions in groups and work on tasks in a cooperative manner.							
3	<b>Contents</b> Computer vision is an interdisciplinary field of work in which methods for the analysis and interpretation of individual images and image sequences are used. Applications include security technology, the localisation and navigation of autonomous vehicles or the reconstruction of objects. The application of current methods for selected topics as part of projects is an essential part of the course. Examples of possible content include: camera calibration, feature extraction, image segmentation, object detection, tracking. Project process: In consultation with the lecturer, the students select topics and work on these in groups over the course of the semester. They research the state of the art in technology and science, implement a chosen solution approach as working software, evaluate and document their results as part of presentations.							
4	<b>Participation requirements</b> None							
5	<b>Form of assessment</b> Written examination or oral examination or term paper or project work or performance examination or scientific poster or short publication manuscript or research funding application or practical project, excursion or daily protocol or portfolio or learning diary or OSPE or (according to Section 14 (4) RPO) a combination of different forms of assessment. Examinations may be held digitally.							
6	<b>Condition for the award of credit points</b> Certificate of successful participation ("Testat") and passed module examination							
7	<b>Application of the module</b> (in the following study programmes): Computer Science (B.Sc.)							
8	<b>Module coordinator</b> Prof. Dr.-Ing. Jan Rexilius							
9	<b>Other information</b> Literature will be announced in the course.

	Practical		4 SCH/60 h	315 h			15	German
2	<b>Learning outcomes/competences</b>							
	<p>The students are familiar with typical applications for the use of deep artificial neural networks in the field of computer vision and understand their basic functioning. Students are able to implement selected procedures with suitable software libraries.</p> <p>Working in project teams, they are able to independently discuss issues related to deep learning in groups, develop solutions and implement them in practice. In addition, students learn to work on tasks in a cooperative manner and to carry them out within a specified period of time.</p>							
3	<b>Contents</b>							
	<p>The analysis and interpretation of images and videos using deep learning methods represents the current state of the art for many applications in the field of computer vision. This includes applications in the fields of autonomous driving, security technology or medicine.</p> <p>The lecture covers both basic and advanced deep learning methods and architectures. In terms of content, it focuses on applications in the field of computer vision. Examples of possible contents include: deep learning frameworks, convolutional neural networks (CNN), architectures for CNNs, object recognition and image segmentation with CNNs.</p> <p>Project process: In consultation with the lecturer, the students select topics and work on these in groups over the course of the semester. They research the state of the art in technology and science, implement a chosen solution approach as working software, evaluate and document their results and present their findings.</p>

	0.3 SCH Individual lecturer-based faculty tutoring		10 h		350 h		Individual lecturer-based faculty tutoring Independent preparation of the bachelor thesis	1	German
<b>2</b>	<b>Learning outcomes / competences</b> The independent solution of a practice-related topic according to scientific principles is one of the professional skills of a computer scientist. The systematic processing and practice-related implementation of a task as well as the coherent presentation of reports and publications serves as communication between experts and ensures that acquired knowledge and skills are retained. Students learn how to methodically process a task and present it with a clearly structured result in a given time frame by quickly familiarising themselves with a new task and independently deepening their knowledge in a specific area. Students learn to use common tools and methods for work support, apply a range of subject-specific skills, abilities and techniques in order to solve tasks independently, to analyse and evaluate them and to present them in an overall context.								
<b>3</b>	<b>Contents</b> The bachelor thesis is intended to prove that students are able to solve a complex problem using scientific methods within a limited period of time and to document the theoretical and practical knowledge acquired in a comprehensible manner. 1. Define the concrete details of a task 2. Preparation of a timetable 3. Evaluation and listing of the techniques and methods to be used 4. Creation of a software concept 5. Implementation and documentation of the software solution 6. Overall view, test and evaluation of the solution 7. Presentation of the solution in the form of the bachelor thesis								
<b>4</b>	<b>Participation requirements</b> <b>Formal:</b> Passed module examinations according to the course schedule except for four module examinations (see also BPO). <b>Content:</b> Knowledge in the breadth of the subject studied								
<b>5</b>	<b>Form of assessment</b> Bachelor thesis assessed by two examiners								
<b>6</b>	<b>Condition for the award of credit points</b> Module examination pass								
<b>7</b>	<b>Application of the module</b> (in the following study programmes): Computer Science (B.Sc.)								
<b>8</b>	<b>Module coordinator</b> Lecturers in the computer science study programme (Becking, Behrens, Brunsmann, George, Gips, Hoffmann, König, Kreienkamp, Müller, Thiel)								
<b>9</b>	<b>Other information</b> Working materials and literature correspond to the individual assignment
